

- Greeting

We hope that all is well with you. I would like to express my sincere gratitude for your continued support in many fields.

We are pleased to announce that the 65th Annual Meeting of the Japanese Society of Clinical Cytology (Spring Meeting) will be held at the Osaka International Convention Center (Grand Cube Osaka) in Nakanoshima, Osaka, on June 7 (Fri), 8 (Sat) and 9 (Sun), 2024.

The Society was established in 1962 as a professional society to promote academic research in clinical cytology and cytodiagnostics and their application to clinical practice. Currently, the Society has more than 11,000 members and is affiliated with the Japan Medical Association. The society has played an important role in the practice of oncology by educating and certifying cytology specialists and cytology technologists. Compared to other countries, cytological diagnosis in Japan is of a very high standard, and has been established as a less invasive cancer diagnosis method compared to tissue diagnosis. In recent years, it is also expected to contribute to cancer genome medicine, and attempts are being made to develop new cell diagnostic methods using remote diagnosis and artificial intelligence. The society is made up of a diverse range of professionals, including clinical cytotechnologists and physicians from a variety of medical fields, such as pathology, obstetrics and gynecology, internal medicine, and surgery. At the upcoming "65th Annual Meeting of the Japanese Society of Clinical Cytology (Spring Meeting)," many special lectures, educational lectures, requested lectures, symposia, workshops, international forums, etc. are planned under the theme of "Future of Cytology Fostered by Diversity" to further develop the field of cytology. We intend to make the conference a place where cytological diagnosis can be further developed. More than 5,000 participants are expected to attend the conference.

We are sincerely looking forward to seeing many members.

Eiichi Morii, MD, PhD

Chairman and Professor, Department of Pathology, Osaka University Graduate School of Medicine
